Profile

Founding engineer building customer-facing AI agent products. Background in enterprise auth and backend systems.

WORK EXPERIENCE

Adapt, Founding Engineer Jan 2026 – Present | San Francisco, CA

- Built private-by-default chats and reusable custom skills, giving customers control over access, sharing, and repeatable agent workflows.
- Owned phone messaging and customer-branded Slack apps from implementation through rollout and customer feedback; maintained core agent workflows and resolved production issues.
- Enabled secure access to company knowledge and connected tools through hosted MCP with OAuth sign-in.
- Built a feedback-to-evaluation pipeline that detected negative user feedback in Slack, added regression cases, and generated fixes with automated pull requests.
- Ran fixes against existing and new evals, publishing before-and-after results in each PR; automated daily benchmark and agent-harness review summaries.
- Built self-service subscriptions and enterprise billing flows covering credits, recharge, overages, and pilot transitions.

JP Morgan Chase, Software Engineer II 2024 – Nov 2025 | Columbus

- Developed OAuth/OIDC APIs with Java Spring Boot and Cassandra on Chase's banking-app security team.
- Led legacy application migration to AWS using Kubernetes and Terraform.
- Built data synchronization systems between Cassandra clusters.
- Implemented testing with JUnit, Cucumber, and Blazemeter.

JP Morgan Chase, Software Engineer I 2022 – 2024 | Chicago

- Migrated batch processing workflows to AWS infrastructure.
- Built REST APIs with Java Spring Boot and led mentorship initiatives for new engineer onboarding.
- Contributed Salesforce Apex development through the Force for Good volunteer program.

JPMorgan Chase, Software Engineer Summer Intern 2021 | Chicago

EDUCATION

Gauntlet AI Fellowship

- Ten weeks building partner projects, followed by a demo day with 80 person AI native cohort. 100hr weeks, tokenmaxxed, learned where AI breaks in SDLC and went 0-1 a lot.

The Ohio State University, B.S. Computer Engineering May 2022

- Fundamentals of Engineering Honors program
- Ohio State Running Club, Cyber Security Club, AI Club

Technical Skills

Technical expertise — TypeScript, Python, React, Node.js, Java, Spring Boot, SQL, Cassandra; AI agents, LangGraph, MCP, OAuth/OIDC, regression evals; AWS, Cloudflare, Kubernetes, Terraform, GitHub Actions; C++, FFmpeg, JUnit, Cucumber.

PROJECTS

node-webcodecs 📄

- Built native C++ and FFmpeg bindings exposing browser-standard WebCodecs APIs in Node.js, with TypeScript interfaces for video and audio processing.
- Implemented asynchronous encoding, queue backpressure, and hardware acceleration; shipped static prebuilt packages for Linux and macOS without system FFmpeg dependencies.

Getmetriq

- Co-built an AI analytics workbench with conversational workflows, MCP data connectors, and notebook context. Used JupyterLab and LangGraph agents to write, execute, and refine analysis code for the Gauntlet AI capstone.

AI Tinkering

- Built iMessage running coach for my partner (would love to talk about this, many tradeoffs + opinions made. 5hrs to build, still used)
- Delivered live Claude Skills demo for marketers the week Skills were officially launched Oct 2025
- Contributed to WordPress AI and Zed; ported GPU to iOS.
